1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by US patent No. 5,923,486 (hereinafter "Sugiyama").

Sugiyama shows a recording/reproducing apparatus comprising means for reading 3, means for extracting 4, means for installing program information 8, signal processor 6, means for processing 5, and storing means 209. See col.8, ll. 13-29, col. 11, ll. 4-14 for executable programs. Note that recording and reproducing are inverse operations.

Art Unit: 2651

4. In applicant's response of 6 February 2003, on page 8, it is contended that Sugiyama does not teach the installation of program information to a signal processor. The examiner disagrees. As noted in paragraph 5 above, element 8 of installs program information and elements 5 and 6 process the information.
